

To whom it may concern,

REF: H-20 Access Cover Information

Although Halliday Products H-20 access covers are designed for a load rating of 16,000-pound, dual-tire wheel load (32,000-pound axle load) with a 30% impact factor, they are to be used only in applications where they will not be subjected to high-density traffic. They should be installed in off street locations where occasional traffic is expected. Acceptable locations include medians, road shoulders, and out of the way areas of parking lots and parking garages. Do not install in any main thoroughfares.

All fabricated aluminum H-20 covers are welded units with springs, hinges, nuts, bolts and locking systems and are susceptible to weld fatigue and loosening hardware when subjected to high density traffic or in street locations.

Please contact our sales staff should you have any questions or need any additional information.

Sincerely,

Halliday Products Inc
