## **STORAGE, HANDLING, INSTALLATION and MAINTENANCE**

### **STORAGE:**

Prior to installation, access covers should be stored in a dry area on the original shipping pallets.

### **HANDLING:**

Standard practice precautions should be taken whenever handling or moving palletized access covers by forklift.

### **INSTALLATION:**

For proper installation, Halliday Products, Inc. recommends the following:

1. Formwork must be flush to the inside of frame of the support ledge. The entire frame and ledge must be supported with Class A concrete.
2. Secure unit to formwork using standard construction practices.
3. When pouring concrete, cover should be in the closed position.
4. Concrete to finish flush with top of unit framework.
5. Unit should be left in formwork for not less than 24 hours.
6. Clean all excess concrete from frame, over seat; and in the case of a channel frame model, the drainage coupling.

### **MAINTENANCE:**

Because access covers manufactured by Halliday Products, Inc. are of all aluminum and stainless steel construction, they require minimal maintenance. For optimum product life the manufacturer recommends the following procedures be performed annually:

1. Apply graphite to the interior of all locking devices.
2. Apply a light coating of machine oil to all hinges and hardware.
3. Remove all debris from the cover seat and around hinges.
4. Check and tighten any loose hardware.
5. In the case of a channel frame model, remove loose debris from channel.
